EXCELDirect Power Vent®

High-Temp Rubberized Silicone Gaskets

Heavy-Duty S/S Locking Band

Precision Laser-Welded Construction

5" Diameter Galvalume Exterior

3" Diameter 444 Stainless Interior

EXCEL POWER VENT ADVANTAGE:

- **CURRENTLY APPROVED FOR ORTAL & URBANA** (pending w/other top fireplace manufacturers)
- **Listed to 550 Degrees F** (higher than other brands)
- **Tightest Seals on the Market**
- **Locking Bands for "Rigid Pipe"** (allows for longer venting runs)
- **No Twist-Lock** - Adjust Pipe and Fittings as Needed
- **Clean Assembly** - NO Lubricants on Pipe or Components for Mess-Free

Industrial Chimney Company

Excel 103HT Insulated Class A Chimney

Excel Chimney is the only chimney sold in the U.S.A. that meets the more stringent Canadian 30 minute chimney fire test. This means that with Excel, your customers are getting the safest chimney on the market.

There are no couplings on the ends of Excel 103HT. Eliminating the coupling also eliminates the thermal bridge between the flue and the casing. With Excel 103HT, the insulation runs continuously from section to section. As a result, there are no hot spots.

With the continuous weld of Excel 103HT, there are only two thicknesses of materials, and only 1/4" of overlap. This allows the flue to expand and contract uniformly around its circumference. The continuous weld on Excel 103HT is totally watertight, eliminating a potential source of chimney corrosion.

Excel 103HT "Smart Parts" make it the easiest chimney system available to install and inventory. 6" Excel 103HT only requires a 10" hole in the ceiling when used with its round or square support. Most brands require a 12" hole. Since roof trusses and floor joists rarely line up with the desired chimney location, a smaller support almost always makes the installation easier.

Excel 103HT is the first insulated chimney to offer adjustable lengths. Adjustable lengths relieve many installation headaches by allowing unlimited center-to-center offsets, easy balancing of cap heights and painless overall length adjustment.

Adjustable wall supports allow for variations in wall finish, virtually eliminating bracing and blocking. The Excel 103HT wall support installs above the insulated tee which virtually allows it to be screwed to the framing instead of anchored into concrete. Excel roof supports, wall supports, offset supports and roof braces adjust to fit 6, 7 and 8 inch chimney.

Excel is protected by a comprehensive lifetime warranty. The warranty provides for full replacement of any chimney lengths damaged as a result of normal wood stove or fireplace operation (including chimney fires) for a period of ten years from the date of installation. See installation guide for details.

Industrial Chimney Company manufactures product from 5" up to 24" inner diameter. For pricing and availability, call AES Inside Sales.

Typical Interior 2-story Free-standing Installation

Insulated Lengths

Excel chimney sections are available in 48", 24", 18", 12" and 6" lengths as well as an 18" adjustable length. This unique part enables an installer to adjust the system to the exact overall length required for any installation. The most common applications are between elbows to achieve any required center-to-center offset. This balances the chimney height when necessary so that the caps line up for functional or aesthetic reasons. Also used when a specific horizontal offset is required. The adjustable length must be installed above a straight chimney section. It will not adjust into an elbow or tee.

Adjustable Length

Tee

The insulated tee may be used on the interior or exterior of the building and in combination with a wall support assembly. Tee cap has a handle on the bottom to simplify removal for cleaning.

Tee

Elbows

Excel elbows are available in 15, 30 and 45 degrees. All Excel elbows are tested and listed to the UL 103HT and ULC S629 standards. Please consult your local inspector before using 45 degree elbows.

Elbow

Round and Square Supports

Excel 103HT ceiling supports are suitable for use on all flat or sloping ceilings. They must project into the room a minimum of 3 inches on a flat ceiling. These supports are designed to act as a combination of support and attic radiation shield. To use either support as an attic radiation shield, simply close the open area at the top of the support (in the attic) with a storm collar. The trim collars are separate from the supports allowing for easy installation before or after the ceiling finish is applied. Square supports include a black end cap and trim ring.

Square Support

Support Extensions

Support extensions are available to facilitate installations on very steep pitched ceilings or where the chimney must project unusually far into the room. Both the round and square support extensions are 24" long.

Flue Extension

The flue extension fastens to the bottom of the first chimney section with three screws making it

Industrial Chimney Company

Excel 103HT Insulated Class A Chimney

Wall Radiation Shield

The wall radiation shield is used when the chimney passes horizontally through a combustible wall. The WRS telescopes to adjust for wall thickness, so no painting is required. The inside trim collar is separate from the WRS, allowing for easy installation before or after the wall finish is applied. Includes a flue extension and trim ring.

Wall Support/Wall Band

The wall support is used to support the vertical chimney on a through-the-wall installation. It installs on the first section of the chimney above the tee (not on the tee itself) thus making it easier to fasten the support to framing instead of into concrete. It is a universal design made to slide in and out to fit a variety of wall profiles. An Extended Wall Support is available (in place of the standard Wall Support) for installations requiring added extension flexibility.

Trim Rings

Used to finish round supports. Chimney Trim Rings are used to finish chimney pipe with no support.

Locking Band

All Excel 103HT insulated components are designed to be fastened together with the stainless steel screws provided with each part. In some cases, it may be desirable to install a locking band. The locking band is designed to overlap the two beads immediately above and below the chimney joint and fasten with a 1/4" bolt.

Wall Channel

The wall channel enables a wall support or wall band to be fastened solidly to the framing when the framing centers don't line up with the chimney opening. The wall channel is 24" long.

Roof Support

The roof support is primarily used when it is difficult to use a round or square support in a cathedral ceiling. It can also be used above an offset or to provide additional support when the chimney height exceeds the capacity of the primary support. The roof support utilizes a universal band and is made with adjustable brackets allowing it to adjust easily to any roof pitch.

Offset Support

The offset support is primarily used to re-support the chimney above an offset, however it may also be used to provide additional support when the chimney height exceeds the capacity of the primary support. The offset support straps are 24" long.

Roof Brace

The roof brace is used to provide lateral support for a chimney which extends more than 5 feet above a roof. The roof brace utilizes a universal band to fit 6, 7 and 8 inch chimneys. The arms on the roof brace telescope from 5 feet to 10 feet long.

Radiation Shield

The radiation shield is used to protect combustible framing in the floor or ceiling adjacent to the chimney. It serves as a firestop spacer to prevent a fire from traveling through the opening between the chimney and the framing. Use the Insulated Radiation Shield for energy efficient construction.

Chimney Top Damper

Adding this "Top Damper" to a system seals it right at the top of the chimney. The "Chimney Top Damper" is placed directly below the cap and is designed to prevent any cold air infiltration into the

Industrial Chimney Company

Excel 103HT Insulated Class A Chimney

Anchor Plate

The anchor plate is used to fasten an Excel chimney system to a masonry fireplace or extend an existing masonry chimney.

Snow Wedge

Protects from heavy snow load. Fasten to plywood or backing with a minimum of 8 screws. Tabs on wedge are adjustable from 4/12 roof pitch up to 12/12.

Rain Cap

Excel rain caps are made entirely of stainless steel. The dome is designed to shed rain and debris, while optimizing draft. Excel chimneys must be installed with an Excel rain cap. The deluxe cap also has a skirt to deflect wind and a stainless steel band to reduce the entry of driving rain. An optional spark screen is available to help arrest sparks in installations where they may pose a safety problem. The rain cap is very easy to install and to remove for cleaning and is held in place by four screws through the tabs provided into the chimney.

Revolving Rain Cap

The revolving rain cap helps to prevent the entry of wind driven rain and helps to prevent wind induced downdrafts.

Deluxe Rain Cap

The deluxe cap is made from .025" thick type 304 stainless steel and carries a lifetime 100% full replacement warranty.

Rain Cap Base

The bottom portion only of the rain cap to allow for a custom chimney top termination.

Spark Screen

Used in conjunction with a rain cap for spark protection.

Decorative Caps - Round & Square

The decorative caps are designed to simulate terra cotta chimney pots for superior aesthetics when terminating a site fabricated chase. They can also be used to terminate a chimney liner in a masonry chimney. A decorative cap flashing is required. NOTE: The installation requirements for these caps are quite specific and should be reviewed before constructing the chase.

Flexible Base Flashing

The flexible base flashing combines a stainless steel cone with a flexible lead base which can be easily formed on site to match virtually any roof profile. It was designed for masonry tile roofs but can be used wherever a flexible base is required.

Decorative Cap Flashing

The decorative cap flashing is made from galvalume steel only and is required with the decorative cap.

Flashings

Standard flashings are available in a variety of configurations to suit various chimney diameters, roof slopes and installation types. Ventilated flashings are intended for mobile home use and for installations where the chimney is enclosed in the attic. All flashings include a collar.

Metal Roof Flashings

Metal roof flashings are designed to be easily installed on most metal roof profiles. These flashings are offered in a variety of configurations to suit most roof slopes. Offered in galval-

Industrial Chimney Company Residential Insulated Stack (R.I.S.)

Residential Insulated Stack (R.I.S.) may be used to extend a masonry chimney which has been lined with an approved chimney liner. This type of repair is generally found where the original flue tile has been damaged by chimney fire or moisture and, in cases, where the flue has been relined to reduce its cross section. R.I.S. may also be used as a chimney for masonry fireplaces.

R.I.S. chimneys have been specifically designed, tested and listed to vent masonry fireplaces in residential installations and to extend existing masonry chimneys. One of the primary applications of R.I.S. is for the repair of earthquake damaged masonry fireplaces and chimneys. ICC provides components designed to correctly adapt its products to existing masonry construction and warrants the performance and mechanical integrity of its system when it is correctly installed on a structurally sound foundation.

The R.I.S. anchor plate has a single wall connector section designed to allow a metal chimney liner to be screwed directly to it. Refer to the Excel 103HT brochure at the end of this section for chimney sizing tables and recommendations on flue height.

The requirements for chimney repair vary substantially from jurisdiction to jurisdiction. We strongly recommend that you contact your local building officials to determine the requirements in your particular area before attempting any chimney repairs. Some municipalities have specific written repair requirements; most other areas are not as specific. Two sources of information concerning the construction and inspection of masonry chimneys and fireplaces are "The Residential Fireplace and Chimney Handbook" written by the Masonry Institute of America and "Repair of Earthquake Damaged Masonry Chimneys Using New Metal Chimneys" by the City of Los Angeles Departments of Building and Safety.

Stock status may vary between AES warehouse locations. To confirm stock status, log onto the AES Partners Site or call AES Customer Service 1-800-682-9722.

Ultrablack FS Double Wall Black Stovepipe

Ultrablack FS (fully shielded) double wall black stovepipe requires just 6" clearance to combustible materials in all diameters-even when installed in a corner or parallel with a ceiling (Check manufacturer's clearance requirements).

Ultrablack has a smooth, clean appearance to complement any stove installation and maximize flue gas temperatures, insuring good draft when used with catalytic stoves. It's constructed of type 304 Ultra matte stainless steel, a specially designed stainless steel that is more attractive and scratch resistant when painted. Ultrablack is painted with Forrest Paint "Stove Bright" Flat Black (FP6304) premium quality high temperature stove paint. Parts are shipped wrapped in heavy paper or plastic to insure an attractive, scratch free finish.

Ultrablack assembles like a regular single wall stove pipe without complicated, unsightly twist lock connectors or spot welds, and no cutting required for installation. It easily fits most stoves, including cast iron stoves and those with oval collars and comes complete with black oxide screws and pre-drilled holes to insure safe, easy installation.

7" ULTRABLACK CHIMNEY IS NON-STOCK WITH EXTENDED LEAD TIMES

Excel Prime

24-Gauge Matte Black Stove Pipe

24 gauge heavy steel construction – Extra resistant to damage & long lasting use.

Laser Butt welded seams – Creates perfectly round lengths, making installation incredibly fast and easy.

Made of Satin Coat Steel – Designed to be painted for maximum paint adhesion, minimal scratches and excellent corrosion resistance.

New Smoke-Free Stove Bright Flat Black paint – No more smoke at start up & easy touchups.

Universal design - Fits any brand of Class A chimney and fits almost all stoves without an adapter.

5 year, No questions asked, 100% full replacement warranty.

Industrial Chimney Company

EXCEL Pellet Vent

EXCEL Pellet is manufactured using specialized machinery which makes it possible to maintain strict tolerance between components. This ensures a quality fit and allows the factory to apply a silicone gasket. Both of which help reduce installation problems and installation time. ICC EXCEL Pellet is tested and listed to U.L. Standard 641 and designed for venting pellet stoves, pellet inserts and pellet heaters.

ICC EXCEL Pellet features

- Continuously welded seams leave a sleek, attractive exterior as well as ensuring a tight, leak-free fit between components.
- ICC created specialized machinery to create leak-free elbows, they don't cut corners by using their B-Vent machine.
- The factory installed and tested 100% Silicone gasket eases installation by eliminating the need to tape or silicone the joints on site, this also preserves the clean look of the system.
- Excellent Pellet to Masonry and Pellet to Class A Chimney adapters give you and your installers an alternative to BCADV.
- Each piece is pressure-tested by hand at the factory before it is shipped out, decreasing call-backs from customers with leaky venting.

Industrial Chimney Company

EXCELiner Rigid Liner

EXCELiner is designed and approved to replace clay tile liners which have become cracked from age, misuse or damaged by chimney fires. EXCELiner can be used to reline masonry chimneys which have deteriorated due to chimney fires, spalled tiles, moisture damage or eroded mortar joints.

By reducing the chimney to the correct size for the appliance, EXCELiner improves draft, reduces fuel consumption and helps insure consistent operation. There is less creosote formation in a properly sized flue which decreases the probability of a chimney fire.

EXCELiner is listed to UL and ULC standards by Warnock Hersey Professional Services to be used as stainless steel liner in a new chimney, instead of a clay tile liner. Unlike clay tile liners, EXCELiner can withstand chimney fires without damage and comes with a lifetime warranty.

EXCELiner has continuous welded seams which means no leaks and no possibility of seam separation. All stainless steel components are made of type 304 stainless steel with factory hemmed ends for smooth, safe surfaces. No drilling is required. EXCELiner comes with pre-punched holes and all stainless steel rivets provided with each liner section.

To order, enter the appropriate chimney diameter size into the item number.

Industrial Chimney Company

EXCEL Direct Vent

Construction/Performance

EXCEL Direct features a stainless steel flue and satin coat outer casing. Both the flue and casing are continuously laser welded insuring they are always perfectly round. The precision tapered coupling system is formed directly onto the male and female end of each tube.

This precision coupling system, combined with precision laser welded construction enables EXCEL Direct to accomplish two important performance objectives:

- The EXCEL Direct system is the most airtight, leak-free system in the industry.
- The EXCEL Direct system is the fastest and easiest system to install.

The lengths fit together effortlessly and are fastened with three small screws through pre-punched holes.

Terminations

There are three different terminations (two horizontal, one vertical), plus snorkel options. These terminations are sufficient to do any installation and cut down on SKU's. Builders and homeowners have told us they don't want to emphasize terminations, they want them to disappear. Our terminations are attractive, perform as well or better than the other guys in all wind conditions and can be painted to match the house. A slip section is integrated into every horizontal termination.

Appearance

The tapered coupling system, combined with laser welded lengths provide a clean smooth appearance to the galvalume exterior.

Laser welding, smooth couplings and the high quality Forrester Paint finish provide an unmatched appearance to our black painted components making it the ideal choice for freestanding applications.

Appliance Compatibility

EXCEL Direct has been designed to fit all appliance using 4/6 and 5/7 diameter vents including those which come with DuraVent adapters factory installed.

EXCEL Direct is tested to UL 2112 Standards.

Excel Direct Power Vent (3x5)

EXCEL Direct Power Vent is the essential solution to pressurized direct vent systems. Ideal for direct vent appliances with a power termination or in-line fan. It is listed to a higher temperature rating than other brands and has the tightest seals on the market.

No taping of joints or sealants are required, and it arrives clean without lubricant on the gaskets. Just fast, easy, clean assembly.

Required Components For Ortal Fireplaces

Flush Mount and Vertical Power Vent Installations

Part code	Part name	Description	Visual
1. Choose the appliance adapter required			
A1 TX-35DPR43	Appliance adapter 4x6 5/8	Use the DPR43 to connect to appliances with a 4" x 6 5/8" flue collar	
or			
A2 TX-35DPR53	Appliance adapter 5/8	Use the DPR53 to connect to appliances with a 5" x 8" flue collar	
2. Fan Adapter Required			
B1 TX-35DPFAD	ICC/CVS Female adapter	An adapter is required to transition to the intake side of the Ortal power vent fan. Attaches to the Duravent CVS® fitting installed on the fan.	
or			
B2 TX-35DPFIA	Fan intake adapter	For use on a PV fan when space is tight. Remove the Duravent adapter and install this one.	

Inline 180 and Inline 90 Power Vent Installations

Part code	Part name	Description	Visual
1. Choose the appliance adapter required			
A1	TX-35DPR43	Appliance adapter 4x6 5/8	
	or		
A2	TX-35DPR53	Appliance adapter 5/8	
		Use the DPR53 to connect to appliances with a 5" x 8" flue collar	
2. Choose the adapter to connect to the fan intake			
B1	TX-35DPFAD	ICC/CVS Female adapter	
	or		
B2	TX-35DPFIA	Fan intake adapter	
		For use on a PV fan when space is tight. Remove the Duravent adapter and install this one	
3. Choose the adapter to connect to the fan outlet			
C1	TX-35DPMAD	CVS/ICC Male adapter	
	or		
C2	TX-35DPFOA	Fan outlet adapter	
		For use on a PV fan when space is tight. Remove the Duravent adapter and install this one.	
4. Choose a termination			
D1	TX-35DPHT	Horizontal Termination	
	or		
D2	TX-35DPVT	Vertical Termination	
		Required if terminating vertically.	

EXCELDirect Power Vent® vs CVS®

Lengths	EXCELDirect Power Vent	DuraVent CVS
6" Length	TU-35DPL6	35CVS-06
12" Length	TU-35DPL1	35CVS-12
24" Length	TU-35DPL2	35CVS-24
36" Length	TU-35DPL3	35CVS-36
48" Length	TU-35DPL4	N/A
12" Length with drain	TU-35DPLD	35CVS-CD
12" Slip Length	TU-35DPLS1	35CVS-12TA
24" Slip Length	TU-35DPLS2	N/A
Elbows	EXCELDirect Power Vent	DuraVent CVS
Elbow 45°	TV-35DPE45	35CVS-E45
Elbow 90°	TV-35DPE90	35CVS-E90
Supports & Firestops	EXCELDirect Power Vent	DuraVent CVS
Wall Thimble	TX-35DPWT	35CVS-WT
Insulated Wall Thimble	TX-35DPWTI	35CVS-WTP
Firestop Ceiling Support	TX-35DPFS	35CVS-FS
Firestop Plates	TX-35DPFSP	N/A
Base Support	TX-35DPBS	N/A
Wall Support	TX-35DPWS	35CVS-WS
Offset Support	TX-35DPOS	N/A
Roof Support	TX-35DPSR	35CVS-RS
Horizontal Band	TX-35DPHB	N/A
Attic Radiation Shield	TX-35DPAS	35CVS-IS
Terminations	EXCELDirect Power Vent	DuraVent CVS
Horizontal Termination	TX-35DPHT	35CVS-HCR
Vertical Termination	TX-35DPVT	35CVS-VC
Flashings and Collars	EXCELDirect Power Vent	DuraVent CVS
Flat Flashing	TW-35DPF	N/A
Flat Flashing 1/12-7/12	TW-35DPFA	35CVS-F
Flat Flashing 8/12-12/12	TW-35DPFB	35CVS-F
Storm Collar	TW-35DPSC	35CVS-SC
Accessories	EXCELDirect Power Vent	DuraVent CVS
Fan Intake Adapter	TX-35DPFIA	N/A
ICC/CVS Female Adapter	TX-35DPFAD	N/A
Fan Outlet Adapter	TX-35DPFOA	N/A
CVS/ICC Male Adapter	TX-35DPMAD	N/A
Adapter 4/6.5 to 3/5	TX-35DPR43	SASSMADP-4/6
Adapter 5/8 to 3/5	TX-35DPR53	SASSMADP-5/8
Locking Band	TX-35DPLB	N/A

3/5 power vent typical installations
